                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a polymer of an analogue of the spider silk protein spidroine major 2. The protein improves the moisturizing/softening action of the compositions. The protein, and its fragments are used in cosmetic or dermatological compositions. These compositions have use as hair or skin care products; and make-up or sunscreens. As the protein is a good, persistent film-formers on the skin of low surface density, it can be used for delivery of active agents that are generally difficult to administer, e.g. vitamins, hormones, moisturizers or agents for treating disorders of the skin and hair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11-FEB-1998;

E70806

hypothetical glycine-rich protein Rv3507 - Mycobacterium tuberculosis (strain H37RV)

C;Species: Mycobacterium tuberculosis

C;Date: 17-Jul-1998 #sequence_revision 17-Jul-1998 #text_change 20-Jun-2000 .

C;Accession: E70806

R;Cole, S.T.; Brosch, R.; Parkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon, S.; Connor, R.; Davies, R.; Devlin, K.; Feltwell, T.; Gentles, S.; Hamlin, N.; Holroyd, S. Rajandream, M.A.; Rogers, J.; Rutter, S.; Seeger, K.; Skeiton, S.; Squares, S.

Nature 393, 537-544, 1998

A;Authors: Sqares, R.; Sulston, J.E.; Taylor, K.; Whitehead, S.; Barrell, B.G.
A;Title: Deciphering the biology of Mycobacterium tuberculosis from the complete genome A;Reference number: A70500; MUID:98295987

A;Accession: E70806

A;Status: preliminary; nucleic acid sequence not shown; translation not shown
A;Residues: 1-1381 <COL>
